

## **World of Courage – School Theme 2017**

We the TOS fraternity believe that in this world of choices and possibilities, it is very unfair to restrict our students to very few options. While the world around us puts restriction on their freedom we prefer to offer a buffet of opportunities to our students, to help them fill their platter of aspirations and desires and assist them to taste success in their desired field of interest.

We stimulate young minds to think about science beyond science and to appreciate languages as a tool to connect than mere a mode of communication!

We impart life skills to our students so that they have the courage to challenge their own limitations and inhibitions.

We inspire them to confront the world by drafting their vision in global context rather than living others' dreams.

We encourage them to put forth their ideas with clarity and conviction and to reach out to community with compassion rather than being a by standard.

We kindle their desire to think beyond text and to widen their horizon by choosing unconventional paths, through career camps, traineeship and conclaves to share their innovations.

We embolden them to relax and unwind rather than cowing down to stresses and pressures of expectations.

We promote respect along with sense of responsibility and accountability rather than developing dependency.

We promote values and tradition by twinning them with technology to connect with the world of possibilities.

We promote relationship building which fortify their confidence to excel in the world of stiff competitions.

Last and most importantly we provide them with the courage to say No!
